

## **PROJECT ABSTRACT**

### **SALONIST**

Beauty parlor management system is a web-based salon management application with appointment scheduling functionality. In this system user can review stylists online and can make appointment online. In this system beauty parlor owner can make their account online and give details of the services they offer and also describe the stylist information. User can review the salon and their services using this system and can make appointment with favorite stylist online. User can also cancel appointments online. User can also write and reviews about the salon or stylist. This system helps both the customer and the salon. This system keeps track of customer, employee, along with the payment for the services. This is a fully equipped system that alone manages the entire function of a salon. The system has three modules which works as follows:

#### **Admin Module**

Once admin or the so-called saloon owner login to his/her account it enables them to manage their employees as well as customers easily. The admin can view his registered employees and customers and their actions. The online application provides means to handle the employee attendance easily by making it online. The absence request or leave request are also processed through online forms. The admin takes necessary actions like approval or rejection depending on the situation. The salary of employees is managed online. The admin can also view various cash payments done in the saloon. The cash payments are completely through online so that the admin can keep a track of his profit or loss.

Admin adds or removes packages provided in the saloon which will be seen by customers. It's the admin who can block or unblock the employees. The admin can view ratings provided by the customers for her saloon services.

## Employee Module

The employee is also provided with an online account. This account makes his actions simple through various forms. The billing is online which simultaneously seen by the customer in his account once the service is completed. The employee can submit an online application for his absence. Employee can view various customer accounts and packages used by them. Depending on this information the employee is provisioned to provide various offers on packages depending on the previous pattern of service usages of the customer.

## Customer Module

The customer can view various packages provided by the salon. The customer can make online reservations for the stylists depending on their available time. The customers can provide feedbacks or rate the services provided by the saloon.

They can pay the service charge through online payment mode.
